

PRESS RELEASE – 8 September 2011

Clearer Audio Copper-line Alpha ONE Power-HUB

UK Retail Price – from £40.00 (6-way with 1m inlet)

Launch date – 8 September 2011

We are pleased to announce the launch of our new entry-level Copper-line Alpha ONE Power-HUB. Design, materials and construction have been drawn from our Copper-line Alpha Power-HUB along with further research and development resulting in exceptional specification for the cost.

The three-system circuitry module (encompassing Hyperion, Gatekeeper and Earth-View) developed for the Copper-line Alpha Power-HUB has been utilised in the new Copper-line Alpha ONE Power-HUB. The Hyperion Filter System actively removes a wide range of noise due to the high-grade choke, X2 and Y1 class capacitors. The Gatekeeper Surge Protection offers unrivalled levels of protection from surges and transients protecting not only the live-neutral lines but also the live-earth and neutral-earth lines. Along with protecting all three channels, the system is double-redundant ensuring full protection of the connected system. Finally, the Earth-View System constantly monitors the integrity of the ground connection ensuring system safety. Three separate LEDs indicate each system is active; should any LED go out, the HUB can be returned to our workshop for service.

A new high purity copper-alloy busbar was designed and developed for the Copper-line Alpha ONE Power-HUB. Unlike other busbars which require socket contacts to be coupled to it separately (resulting in additional contacts and a degradation in performance) our busbar design is of one whole piece with the socket contacts integrated. This elimination of unnecessary contacts with the most direct contact to the plug pins, results in the best performance possible.

The HUB is fed with our new Copper-line Alpha ONE Power Cable providing superb all-round performance. The high purity conductors capable of 15A of continuous current delivery provide superb performance whilst the active shielding system minimises airborne noise pick-up and interactions with other cables nearby.

The HUB is built in our workshop from building the inlet cable from start to finish, to hand soldering to the filter module, to final testing and packing. Our reputation for manufacture of high quality products is clear to see with this new entry-level HUB which is built to last.

Like all of our cables the Copper-line Alpha ONE Power-HUB comes with our 60 Day Money Back Guarantee, Limited Lifetime Warranty and Free UK Mainland Delivery.
